

learn by quiz cards

serious learning but a game

quiz cards with education

The quiz card method feels like a game, but it is serious learning.

The learning is more effective than reading a textbook.

You get questions, you are engaged, and you are constantly rewarded for guessing logically and / or correctly.

first out are geography and history

Akelius pedagogic means educational tools for engaging, faster, more fun, and easier learning.

The answer is not only the tool.
Add more methods and more senses.

learning by questions

your child gets self-confidence

One billion people watch TV knowledge games, play quiz cards, or board games with questions.

After a few turns with quiz cards or board games, your child tends to remember.

Your child remembers better and faster than you.
Your child gets a feeling that learning is profitable.

only school subjects

A huge part of TV-quizzing involves sports results, pop music, word building, or extremely odd questions.

Akelius focuses on school subjects.
Your children will feel good at school

more education than using flash cards

On the internet, you will find flash cards for several hundred subjects, difficult words, SAT words, languages, driving license, and most university subjects, such as law and biology.

The present flash cards on the internet work only as a test, not as an educational tool.

serious learning

Use batches of some thirty cards.

If you know the answer to a card, put that card aside to a new, ready batch.

If you missed the answer to a card, put that card at the bottom of your ongoing batch.

The difficult card may return to the bottom until there is only one card left.

walk and learn

The Akelius printed quiz cards are suitable for forest and beach walks, beach life, travels, or wherever.

easy reader

combine learning a language with learning history, geography, or math

Regularly, the textbook stories to read when learning a second language are boring. A famous author writing an exciting story in a book uses descriptive words and several synonyms.

Akelius uses easy reader quiz cards. On the backside of the card, you find an explanation with pictures of words not belonging to the five hundred most common words.

That means an adult in Germany, learning Spanish, may choose the Spanish version of the cards.

Akelius provides the cards in ten languages.

För beginners in a second language, repeating math in the new language is seldom a problem. You will recognize most words. Difficult words have the same base.

Math

In English: sin, cos, logarithm, derivative
En français: seno, coseno, logaritmo, derivada
En español: sen, cos, logaritmo, derivada
на русском: синус, косинус, логарифм, производная

History

In English:
En français: cunéiforme, pyramide
En español: cuneiforme, pirámide
на русском: клинопись, пирамида

Geography

In English: inhabitants, mountains
En français: habitants, montagnes
En español: habitantes, montañas

In ordinary schools, students prefer to read history and geography rather than struggle with a language grammar.

Let the children do what they want to do, and learning the language as a side effect.

I mean, do not hesitate to use the quiz cards in a language other than your own language.

the product

game, education, knowledge level

Use Akelius quiz printed cards as

- game, amusement, with friends or responsible parents
- flashcards developed as educational cards
- amplify the text for quiz walking

Use the online version for individual learning.

subjects: geography, history

Akelius starts with two subjects suitable for *international* school education: geography and history.

After a real-life test and upgrading of these cards, the following international subjects may be math, chemistry, and physics.

Akelius will not teach the community, governments, and religion because of too many governmental restrictions.

five grades

Akelius divides the cards into five grades: 3, 6, 9, 12, and U for university.

If there is any doubt about where a question will fit, Akelius puts the card in the higher level.

The client, in grade six, will be proud to have solved a grade nine question.

The client, in grade 12, gymnasium, will be proud to have solved a university question.

basic rules for learning

- use several senses
- narrative
- background reasons
- immediate correction, answers within one second
- questions work better than reading how it is
- repetition seven times during half a year

why, explain the background.

history is more than the top one percent

Most historical textbooks describe kings and great people.

99 percent were ordinary people, poor, hungry, slaves, and lived during extremely hard conditions.

They normally had to work ten hours per day.

I want to tell more than the one percent history.

If possible, add the background.

Explain why.

Insert such text on the back side of the card.

Socrates

I tried to explain why Socrates was unique:

When people are poor, hungry, and/or are slaves, it does not matter if they ask: Why.

The historical development appeared thanks to people asking why.

By the fifth century BC, Athens had become one of the richest and most powerful cities in the Mediterranean.

Only some very rich people could read or write. There were no public debates, and no time to discuss.

Trade brings wealth from many countries. Ships arrive daily with goods, ideas, and people from distant countries. Citizens meet in markets, workshops, and public squares.

Athens has an unusual political system called democracy.

Rich citizens vote and could speak in public.

Asking good questions became an important skill. Mathematics, astronomy, medicine, and history were developing rapidly.

let losers win

destroying self-confidence

The winner takes all happiness.

random

Avoid notes, points, or competition showing that you are better than your friends.

Akelius games ought to include random events.

That give the vulnerable person a chance to win.

However, we need points to encourage an individual child or adult to make progress. But that is mostly when playing and learning themselves.

joker

For card games, insert jokers

The Joker may order:

The previous winner shall put back three cards.

The youngest player gets two extra cards.

select level per player

When playing in a family, the youngest one draws cards from the stack of grades 3 and 6, the elder ones from grade 9, and the mother from grade 12.

up to seven cards per subject

For history, philosophers like Confucius, Laozi, Buddha, Cicero, Thomas Aquinas, René Descartes, John Locke, and Voltaire, need one or two cards at the university level.

Socrates needs five cards.

printed cards

The cards are size A6, horizontally.

Example for math

front side:

How many plates will fit on three tables, each with four plates?

back side:

On the back side is a picture of three tables with the plates.

For history and geography, each card gives on the front side a hint to decide which of four answers is the correct one.

The back side gives answers, shows difficult words, and has a place for explanations.

the front side

a picture or photo

Starting from the left upper corner, give, if possible, a relevant picture as

- a photo from Shutterstock or your own photos
- a drawing
- as the last option an AI-generated picture

For each picture, insert explaining text.

The text under a picture is as strong as a headline.

Skip decorative pictures.

If you do not have a relevant, educational picture, skip it.

the narrative and/or textbook

If you introduce an individual, the text changes from boring Wikipedia or the forced need to read a textbook into a narrative and becomes living.

Example pyramid:

The base area is 400 by 400 meters.

It takes Josef fifteen minutes to walk around this building.

Josef climbs uphill the 150-meter high building in one hour.

four multiple-choice answers

Put four answers in the lower right corner.

Only one answer is correct.

the back side gives the answer

1. the answer
2. explanation of difficult words
3. extra comments or a picture.

online version

The online version uses the Akelius standard layout.

The answer side appears only if the client answers incorrectly.

The explanation of difficult words shall appear before the multiple-choice answer area.

Let the client select one or more grade levels:
3, 6, 9, 12, U.

Give the client a random batch of 18 cards.
Put incorrect answer cards at the bottom of each batch.

When one batch is ready, ask for the next batch.

Akelius rules for writing

do not repeat texts or pictures

Use different texts for different cards on the same subject.

The user will repeat using most cards.

Example from Socrates:

It is enough to mention on one card that he lives in Athens and ask questions.

Use only one picture of Socrates' face.

Other pictures may reflect life at that time, such as the Parthenon.

easy reader words

Refugees and tourists learning a new language, poor children without educated parents, use Akelius games, books, and cards.

Explain all words above the one thousand most common.

seven words per sentence

The client reads more easily if you make an effort to produce short sentences.

If possible, use the present tense.

Present tense means the action is now; is, go, writes

A paragraph ought to be up to seven sentences.

skip words of personal opinion

Skip bigger, circa, many, much, beautiful, or other personal opinions.

If you use biggest, continue to tell biggest in what.

"From 1948, Kiruna was the biggest city in the world, but not anymore."

Akelius has decided the layout

You may have other ideas.

Sorry, one uniform layout is the rule.

Akelius uses Verdana 11 points.

Left margin.

Use **max contrast** with no text on colors.

That means no color plates.

Skip lines and rectangles such as to mark sentences.

Use singular for category.

Write sea, mountain, city,
not seas, mountains, cities

skip this text

my friend AI suggested

The text below is only a copy from an AI text.
I asked what was essential for world history.
You do not have to follow this.

philosopher

Socrates, Plato, Aristotle, Confucius, Laozi,
Buddha, Cicero, Thomas Aquinas, René Descartes,
John Locke, Voltaire, Karl Marx

explorer

Hanno, Pytheas, Marco Polo, Zheng He,
Christopher Columbus, Vasco da Gama, Ferdinand
Magellan, Hernán Cortés, James Cook, Roald
Amundsen, Ernest Shackleton

inventor

Archimedes, Johannes Gutenberg, James Watt, Eli
Whitney, Samuel Morse, Nikola Tesla, Thomas
Edison, Guglielmo Marconi, Wright brothers, Tim
Berners-Lee

invention

Wheel, Writing, Paper, Compass, Gunpowder,
Printing Press, Telescope, Steam Engine,
Telephone, Airplane, Computer, Internet, AI

scientist

Pythagoras, Euclid, Copernicus, Galileo, Kepler,
Isaac Newton, Carl Linnaeus, Charles Darwin,
Marie Curie, Albert Einstein, Alan Turing

discovery

Discovery of America, Northwest Passage, Source
of the Nile, South Pole, Mount Everest, Moon
Landing

artist

Phidias, Michelangelo, Leonardo da Vinci, Raphael,
Rembrandt, Francisco Goya, Claude Monet,
Vincent van Gogh, Pablo Picasso, Frida Kahlo

writer

Homer, Virgil, Dante, Geoffrey Chaucer, William
Shakespeare, Cervantes, Goethe, Charles Dickens,
Leo Tolstoy, Mark Twain, Jane Austen

war

First World War, Second World War, Waterloo,

ruler

Alexander the Great, Julius Caesar, Augustus,
Charlemagne, Genghis Khan, Suleiman the
Magnificent, Akbar, Peter the Great, Napoleon,
Queen Victoria, Abraham Lincoln, Winston
Churchill and Hitler, Stalin

revolution

American Revolution, French Revolution, Haitian Revolution, Russian Revolution, Chinese Revolution, Iranian Revolution

empires and civilizations

Ancient Egypt, Mesopotamia, Phoenicia, Persia, Greece, Rome, Maya, Aztec, Inca, Byzantine Empire, Ottoman Empire, British Empire

|

law

Code of Hammurabi, Twelve Tables, Magna Carta, U.S. Constitution, Declaration of Independence, Declaration of the Rights of Man, Universal Declaration of Human Rights

city

Athens, Rome, Alexandria, Constantinople, Jerusalem, Baghdad, Beijing, Venice, Paris, London, New York

buildings

Pyramids of Giza, Parthenon, Colosseum, Great Wall of China, Hagia Sophia, Machu Picchu, Taj Mahal, Eiffel Tower, Statue of Liberty

social movement

Abolitionism, Women's Suffrage, Civil Rights Movement, Labour Movement, Environmental Movement, Anti-Apartheid Movement

economic

Silk Road, Hanseatic League, Age of Mercantilism, Industrialization, Great Depression, Bretton Woods, European Union

diseases, medicine

Black Death, Smallpox, Cholera, Penicillin, Vaccination, Spanish Flu, COVID-19

international organization

Olympic Games, Red Cross, League of Nations, United Nations, NATO, European Union, World Health Organization

|

For a large educational quiz, you could eventually build around 500–1,000 cards.

A balanced distribution might be:

Philosophers – 40 cards

Scientists – 50 cards

Great rulers – 60 cards

Wars & battles – 70 cards

Inventions – 50 cards

Empires & civilizations – 60 cards

Explorers – 40 cards

Religions – 40 cards

Writers – 40 cards

Artists – 40 cards
Revolutions – 40 cards
Documents & laws – 30 cards
Cities & monuments – 80 cards
Medicine – 30 cards
*International organizations – 20 cards

This structure covers nearly all of world history from ancient civilizations to the present and gives students a broad, globally relevant understanding rather than focusing on a single country or era. It is also easy to expand by adding new categories such as "Women Who Changed History," "Ancient Technology," "Space Exploration," or "World Trade."

Roger:

The above number of cards will be much more as Akelius uses one to seven cards per person or event.
